Week 7 - Individual Challenge - Metasploit Framework and Android Fundamentals

The screenshot shows the 'Using the Metasploit Framework' module page. The user 'romaadjei' is logged in as a member. The progress bar is at 100%, and a 'Completed' button is visible. The module is created by 'Onenine9' and last updated on '7 Oct 2025'. It is a Tier 0 - Easy module, estimated to take 5 hours. The introduction text states: 'This module introduces the fundamentals of the Metasploit Framework with a retrospective analysis of the usage of automated tools in today's penetration testing environments. Despite the industry debates revolving around the level of security knowledge needed to operate a swiss army knife type tool such as Metasploit, frameworks such as this allow for in-depth exploration and auditing for which one might not have the necessary time given different circumstances. In this module, we will cover:'. A bulleted list follows: '• A preface about using tools'. A table of contents on the right lists: 1. Introduction, 2. MSF Components, 3. MSF Sessions, and 4. Additional Features.

MODULE

Using the Metasploit Framework

CREATOR: Onenine9
LAST UPDATED: 7 Oct 2025

Tier 0 - Easy - 5 hours

INTRODUCTION CONCLUSION

This module introduces the fundamentals of the Metasploit Framework with a retrospective analysis of the usage of automated tools in today's penetration testing environments. Despite the industry debates revolving around the level of security knowledge needed to operate a swiss army knife type tool such as Metasploit, frameworks such as this allow for in-depth exploration and auditing for which one might not have the necessary time given different circumstances. In this module, we will cover:

- A preface about using tools

1 Introduction
2 MSF Components
3 MSF Sessions
4 Additional Features

The screenshot shows the 'Android Fundamentals' module page. The user 'romaadjei' is logged in as a member. The progress bar is at 55%, and a 'Continue learning' button is visible. The module is created by 'bertolis' and last updated on '8 Oct 2025'. It is a Tier 0 - Fundamental module, estimated to take 8 hours. The introduction text states: 'Mobile devices hold sensitive personal and corporate information that hackers may want to obtain. Android Fundamentals seeks to provide a robust foundation in Android application security principles. It aims to enhance beginner penetration testers' understanding of how the Android platform and applications work and what steps they should follow to start with application penetration testing.' The text 'In this module, we will cover' is followed by a bulleted list: '• The architecture of the Android platform and its security features.' and '• The structure of the applications.' A table of contents on the right lists: 1. Introduction, 2. Android Apps & OS Security, and 3. Android Apps & Development.

MODULE

Android Fundamentals

CREATOR: bertolis
LAST UPDATED: 8 Oct 2025

Tier 0 - Fundamental - 8 hours

Mobile devices hold sensitive personal and corporate information that hackers may want to obtain. Android Fundamentals seeks to provide a robust foundation in Android application security principles. It aims to enhance beginner penetration testers' understanding of how the Android platform and applications work and what steps they should follow to start with application penetration testing.

In this module, we will cover

- The architecture of the Android platform and its security features.
- The structure of the applications.

1 Introduction
2 Android Apps & OS Security
3 Android Apps & Development

Android Application Components and
