Attacking Common Applications

The screenshot shows the HTB Academy Lab interface for the 'Attacking Common Applications' module. The browser address bar shows the URL: `enterprise.hackthebox.com/academy-lab/58125/preview/modules/113`. The interface is dark-themed with a green progress bar at the top indicating 100% completion. The left sidebar contains navigation links: Dashboard, Leaderboard, My Profile, Explore, ACADemy LAB (Main, CIS4200-Fall25), and DEDICATED LAB (Instructional DedL..., CIS4200-Fall25, Help Center, Technical Support, Changelog). The main content area features the module title 'Attacking Common Applications' with a tier indicator 'Tier II - Medium - 4 days'. Below the title, the 'INTRODUCTION' section states: 'This module covers a variety of techniques needed to discover, footprint, enumerate, and attack various applications commonly encountered during internal and external penetration tests. In this module, we will cover: Application Discovery & Enumeration, Enumerating and attacking common CMS' such as WordPress, Drupal, and Joomla'. The right sidebar lists the module's creators (mr3n, bertolis, LTNB08, PandaStorm) and the last update date (7 Oct 2025). A table of contents on the right lists the module's sections: 1. Setting the Stage, 2. Content Management Systems (CMS), 3. Servlet Containers/Software Development, and 4. Infrastructure/Network Monitoring Tools.

INTRODUCTION

CONCLUSION

This module covers a variety of techniques needed to discover, footprint, enumerate, and attack various applications commonly encountered during internal and external penetration tests.

In this module, we will cover:

- Application Discovery & Enumeration
- Enumerating and attacking common CMS' such as WordPress, Drupal, and Joomla

1 Setting the Stage

2 Content Management Systems (CMS)

3 Servlet Containers/Software Development

4 Infrastructure/Network Monitoring Tools
