I downloaded the file and opened it on VSCode and got URLs which were encoded with Base64.

The screenshot shows a Pluma text editor window titled 'url.py (-) - Pluma'. The editor contains a Python script with the following code:

```
1 import base64
2
3 key = 254
4
5 urls = [
6     "loqKjo3E0dGT14yf15mMkYu00JaKnNGJjt0XkJ2S15qbjdGJlZ2Jx87MzsvR",
7     "loqKjo3E0dGZm5HT14rQloqc0Z2NjdGPzYTNkpSRzcfK0baqvIX0nJiLjZ3Kis+QmaGKls2hrYqMz5CZjaHPjaGQzoqhzZD0i5mWgw==",
8     "loqKjo3E0dGdn4ybm4zQloqc0Ym0052RkIrbkIrRzpcEjo6Gj8rH0Q==",
9     "loqKjo3E0dGZm5HT14rQloqc0Z2NjdGPzYTNkpSRzcfK0Q==",
10    "loqKjsTR0YmJidCdnJCQm4mNmpeMm52K0JaKnNGJkYyajoybjY3Ry5LP1Y6GysvR",
11    "loqKjo3E0dGVn4yHn4qWn5LQloqc0Ym0052RkIrbkIrRzM3P0Q=="
12 ]
13
14 def decode_xor_b64(encrypted, key):
15     raw = base64.b64decode(encrypted)
16     return bytes([b ^ key for b in raw])
17
18 for i, u in enumerate(urls):
19     result = decode_xor_b64(u, key)
20     print(f"[{i}] {result.decode(errors='replace')}")
```

The status bar at the bottom indicates 'Python 2', 'Tab Width: 4', and 'Ln 13, Col 1'. The window title bar shows 'url.py (-) - Pluma' and the system clock shows 'Thu Apr 24, 17:20'.

Used some scripts online to help decode it with Base64 and created a python file and pasted the code in the file.

```

cacert.der  Documents Music      Public     url.py
[romaadjei@htb-4u2lgtpgxh]-[~]

```

I checked to make sure I was able to access the file in /home

```

[romaadjei@htb-4u2lgtpgxh]-[~]
[★]$ python3 /home/romaadjei/url.py

```

And then I run it and got the flag.
